

HOCATT

(Hypothermic Ozone Carbonic Acid Transdermal Therapy)

How the Ozone Sauna works:

One of the major modalities of the HOCATT Sauna is Ozone Therapy.

The Sauna heats the entire body, which opens the pores and increases the rate of Ozone gas absorption throughout the whole body.

Ozone seeks out 'electro-positive' cells in the body, these are cells that show signs of stress or damage to repair them by drawing electrons down the electron transport chain in your mitochondria which binds to the damage cells accelerating the healing process, while increasing energy and detoxification.

Ozone (O₃) is an excited gas that containing 3 Oxygen molecules and is 'highly unstable' and this gas breaks down very quickly inside the body, producing 'Hyper-O₂', which detoxifies the body by allowing it to sweat out toxins as it destroys a wide range of pathogens from viruses, bacteria, fungi to some parasites by penetrating the pathogen and oxidizing the membrane of the molecule, which many known viruses and diseases cannot survive in a highly oxygenated environment, which inside the sauna, this environment becomes the human body.

Ozone therapy also stimulates the cardiovascular system and the metabolic system.

The HOCATT Ozone Sauna has been coined the closest thing on the planet to the 'Fountain of Youth'.
